PROJECTS

Pokemon API Pokedex —

Using a Pokedex API I created a simple interactive Pokedex. Clicking a choice results in a pop-up modal with a picture of the Pokemon, and a couple of basic statistics about that pokemon.

Simple Shopping Page —

Using Javascript I created an essential shopping website that will keep track of the number of items, a shopping cart for checkout, and total prices. With options to easily add or delete items as well.

Meet App —

My introduction to test-driven development. React.js App users can search nearby cities for events, and with an authentication, welcome screen users can pass with their google accounts.

EXPERIENCE

StyleRe, Remote — *Front-end lead / Intern*

September 2022 - Ongoing

- Using React-Native, Expo, Android Studio, and Node.js to build a mobile/desktop application.
- Organize assignments for myself and the front-end team while keeping contact with the back-end and managing the GitHub repo.
- Assist team with questions, setting up their dependencies, helping problem solve, and bringing their ideas to life.

Palagio, Jacksonville, FL — *Sous Chef / Kitchen Manager*

October 2020 - December 2021

- Manage day-to-day operations, menu building, ordering, preparation, time management, and food storage/safety.
- Direct and train kitchen staff and waitresses, create schedules and take customer feedback.
